

Type: Rest ECG **Date:** 21/01/2018 14:54:47 **Duration:** 00:00:37

Patient name:	Weight:	38.0 kg	Species:	Dog
ID:	History	Acute weeknes and disp...	Breed:	Doberman
Email:	Medications:		Owner:	
Phone Number:	Code-procedure		Spayed/Neutered	Yes
Sex:	F			
Age:	8			

Mean electrical axis:

Report / Conclusion:

Sinus tachycardia with evidence of left atrial enlargement (based on a wide P-Wave of up to 60 ms) and occasional ventricular premature complexes originating from the left ventricle.

Submitted radiographs demonstrate cardiomegaly (VHS=11.3v) with no left atrial enlargement and no evidence of pulmonary edema.

Dilated cardiomegaly cannot be ruled out and is highly given the signalment and history.

Strat Pimobendan at 0.33 mg/kg every 12h, enalapril 0.5 mg/kg every 12 hours, and spironolactone at 1 mg/kg every 12 hours; if the sleeping respiratory rate does not gradually decrease over the next 3 days, add furosemide at 1 mg/kg every 8 hours.

If diuretics are given chronically, rule out azotemia, hypokalemia, hyponatremia, and dehydration in 3 to 10 days from now, at the most.
